### STAINED/SCORED/MICRO-TOPPING CONCRETE

Staining concrete enhances the existing surface by using transparent reactive stains to bring out the landmarks and character of its previous life. When properly done, this technique can bring depth and detail to an ordinary concrete surface.

Scoring consists of lines cut into the concrete 1/8" deep to resemble tile, borders, and various shapes and designs.

Micro-Toppings are used to enhance or resurface existing concrete. Whether the concrete is cracked, heaving, spalling or just plain boring looking, a resurfacing system exists that can make the surface look like new again. Turning your concrete into a new canvas can be a great way to get the look you have always desired.

"Transform your concrete from an underlayment to a piece of art."

### POLISHED CONCRETE

While all of Decorative Concrete of Texas' services are top-quality, there is no other flooring system that matches the versatility of polished concrete. Polished concrete is becoming the ultimate no-wax flooring choice for commercial projects and home owners across Texas. Because polishing is a multistep process, you can choose the level of sheen -- from satin to high-gloss -- that meets your maintenance and aesthetic requirements. Add in the superior durability and performance of concrete, and it's no wonder why retail, warehouse, and office facilities are going for polished concrete flooring as an alternative to marble, granite, linoleum, or other materials. Decorative Concrete of Texas polishes concrete floor surfaces, whether new or old, to a high-gloss finish. No matter how big or small, it's time to give your floor the ability to truly shine.

### STAMPED CONCRETE/ CONCRETE EPOXY

Stamped concrete is a process in which fresh concrete is imprinted with flexible mats that transfer pattern and/or texture. Typically, the imprint reflects various stone textures but can also produce a look of tiles, resulting in an extraordinary effect. It can be customized into a wide range of shapes and colors to suit Modern, Traditional, or Old World styles.

An epoxy floor coating is one of the most economical and aesthetically pleasing ways to enhance a plain gray concrete floor. These heavy-duty epoxy-based systems not only upgrade the look of the floor, they also increase resiliency to stains, scratches, tire marks and hide minor imperfections. With many colors to choose from for the base coating, which can be further enhanced by decorative quartz or paint chips, epoxy floor coatings give you a wide array of design options for your garage, retail space or industrial establishments.
